Welcome to Cyberspace!

Do you need college level coursework for certification or advancement? Many teachers are finding online learning to be a flexible and viable alternative to the traditional classroom for earning additional credits. To that end, Northern Virginia Community College offers a huge array of distance learning courses. One course that has become particularly popular to teachers needing science credits is a 4-credit lecture course, NAS 150 - Human Biology, which presents an overview of all of the human body systems from the standpoint of their basic anatomy and physiology. Teachers who complete this course learn the fundamentals of human body structure and function and in the process become more proficient on this subject in their own classrooms. They also receive the added benefit of gaining more confidence in reading about medically related issues and in communicating with medical personnel. If you are interested in familiarizing yourself with distance learning in general, or more specifically at Northern Virginia Community College, come to our poster session and see a biology professor and an instructional designer who can put you on the right path!
