Wanted: Technology Directors That Can Lead!

Superintendents want technology directors that can lead public school districts through the maze of present and emerging technology. They want technology directors who can develop and implement an effective plan that supports gains in student achievement and teacher productivity.

In order to prepare graduates who can provide such leadership faculty in the colleges of education must be aware of the present role of technology directors in public schools. This session reveals the results of a study on the role of technology directors in the five hundred largest public school districts in the United States as identified by the U.S. Census. This is the third and concluding phase of a study on the role of technology directors in the 21st Century.
