Reducing Cognitive Overload: Easy Technological Solutions

In the online environment it is important to display course content in a way that doesn't cause cognitive overload. There are a number of software solutions that faculty and instructional designers can use to easily chunk and sequence their content, including various forms of multimedia, for a more professional display either in Blackboard or through the web. This session will introduce participants to a variety of tools that are readily available and present pros/cons of each with examples and feedback from both instructors and students.
