Integrating Internet Resources with Curricular Standards and Information Literacy:
Lessons Learned from a Workshop for Teachers

Dr. Nancy Todd
Director of Undergraduate Teacher Education
College of Education and Human Development
Eastern Washington University
Nancy.Todd@mail.ewu.edu

The purpose of this presentation is to discuss elements of a two-week, half-day workshop designed to prepare teachers to integrate content area standards and information literacy standards with Internet resources by designing a lesson plan that incorporates Internet resources into a web site for K-12 students' use.

Washington State Center for the Improvement of Student Learning is a recognized national leader in developing frameworks for content learning and assessment with its initiative for developing Essential Academic Learning Requirements for the various K-12 content areas and levels.

Students should also become information literate by learning to access information efficiently and effectively, evaluate information critically and competently and to use information accurately and creatively. Information literacy standards for student learning have been developed by the Association for Educational Communications and Technology and the American Association for School Librarians.
