Multimedia Course "Russia History" for University

Elena Drozhdina
Department of Information Technologies in the Automated Systems
Moscow State Institute of Electronics and Mathematics (Technical University)
Russian Federation
hellend@usa.net

This report represents the multimedia course "Russia History". All the course's components are considered thoroughly with special attention paid to such systems developing technology. Multimedia tutoring system consists of three modules (subsystems): tutoring subsystem; tutoring subsystem administrator and testing log analysis subsystem. The tutoring subsystem provides interaction with the student in three modes: learning, training and testing. In the training mode the student are provided with hints, as needed, to help him learn historical figures, events and chronology. The course includes three CD-ROMs, each covering some period of Russia History. The multimedia course is focused on individual learning both within the framework of traditional, and distance education. Basic advantages and prospects of further improvement of the system will be also presented.
