Infusing the use of technology into the school curriculum is not an easy task. Educators want to know how they can do this when they already have much to do and they must use the STANDARDS. This ongoing project matches curriculum standards with web sites, tool software, curriculum-based software and other resources.

Students at this state university have developed and are continuing to update links to instructional resources that support various curriculum standards. The students have studied the standards, explored the Internet, reviewed and evaluated software, books, and other resources and have created a web page that will give educators what they are looking for - assistance with the infusion technology into the curriculum.

The use of this project is as simple as 1,2,3...
1. Go to the web page or CD-ROM.
2. Click on curriculum area of interest.
3. Click on grade level.
4. Click on standard.
5. Select resource.
