Abstract: Having more student-centered online classrooms can facilitate learning and provide better classroom environments. This session will 'journey' into the world of online learning and describe the process of creating student-centered online classes from the ground up. The presenter will discuss sound pedagogical architectures of online classes, with a focus on successfully incorporating interactive communication in the online environment. Participants will learn about a variety of interactive technology tools, such as Poll Everywhere, and other practical online technology tools, participants will also receive step-by-step tutorial information to help guide them through the set-up process once they are ready to use these new tools. An experienced online educator will discuss the ‘do’s’ and ‘don’ts’ of online pedagogy through examples from the field. If you teach face-to-face, in a hybrid setting, or online this session is for you as the technology tools presented can be used to enhance any educational setting.
