

Title: Supporting Schools to Realize the Vision of Instructional Improvement Systems (IIS)

Category: Best Practices, Round-table, or Workshop

Information Tech Topic: Information Technology Diffusion/Integration

Second Topic: New Possibilities with Information Technologies

Third Topic: Research & Evaluation

Through Florida's Race to the Top award by the U.S Department of Education, each district in the state is expected to implement a local instructional improvement system (LIIS) that meets stakeholder needs for access to and use of data to inform instruction in the classroom and operations at the school/district. Public Consulting Group (PCG) has partnered with districts throughout Florida to provide comprehensive technology resources-equipping them with accurate, consistent, and timely data that is necessary to make informed decisions about how best to support effective teaching and learning. Join us as we share the components of an LIIS, the implications on policies instruction, and how to manage and utilize the data. Participants will also learn how this process and these resources can be used throughout the United States and internationally to inform practice and policy.
