My presentation is about supervising students on their terms of probation abroad. For this aim I have developed several years ago an internet site in HTML. We have tested this site in co-operating with our students abroad. To improve this application I have developed a new tool in Lotus Notes/Learning Space.
During the presentation I want to show and discuss the results and our experiences. With this presentation I hope to achieve the following aims:

1. To show how useful the Internet can be in education particularly to supervise the students on their terms of probation.
2. To get feedback and critics on our product.
3. To establish contacts with other colleagues in case of this subject.

Today’s Situation
- All our students abroad have to send their reports to the supervisors.
- Nowadays they use the postal service or send a fax. Sometimes the documents don’t arrive at the workplacement office.
- When they are in trouble, they use the telephone for the communication with their supervisor. This method is very expensive.

Vision Statement
Students and supervisors need a good tool for their communication. Using the Internet is the solution.

Goal
To create a possibility for the communication between students abroad and their supervisors at the university.

The solution
- First we have created a website with all the possibilities available for the students and their supervisors.
- Nowadays we are working with Lotus Notes/Learning Space
