By combining the latest technologies with both a solid pedagogical foundation and continuous evaluation, the Universitat Oberta de Catalunya has built a Virtual Campus: an electronic communications environment that provides the means to effectively support the tutoring of students, and the provision of university resources and social activities.

It has presently a total of 13,000 registered students. Eight main degree programs are offered, as well as Master programs, postgraduate courses and a wide offer of continuous education programs.

The organization is also working on the Metacampus, which mission is to demonstrate the global, virtual cooperation of universities; a concept known as the flexible university which is achieved by interconnecting the partners virtual services and infrastructures.

It will be able to capture, register, invoice, teach, assess and accredit courses and provide all the administrative services in a global scale, using the Internet as the only medium to support all these educational processes.
