Assessor Online Exam System

Nancy Hendrickson and Melanie Ruda
Seward Inc.

Abstract: Assessor II is an exam tool developed by Seward Inc. that allows trainers, instructors, and administrators to quickly create and deliver assessments and exams. At this showcase, two Seward representatives will demonstrate Assessor's features for managing the exam site, selecting the exam characteristics, creating questions, registering users, assigning exams, and generating reports of learner statistics. They will also answer questions about pricing, licensing, and customizing the tool for an organization's needs.

Assessor II Overview

Assessor II allows trainers, instructors, and administrators to quickly create and deliver assessments and exams. The site's interface can be customized to reflect a company's logo and color scheme. Additional types of question forms/interactions can be built to meet the company's needs.

As a managed exam solution, Seward takes care of data backups, security, firewall settings, Windows patches, server maintenance, and database administration. Learners access all their exams within a single system.

Assessor II is licensed on the basis of the number of potential users. For a fee, Seward can also help with graphics, exam development, exam entry, user entry, custom report generation, and item analysis at an hourly rate.

Assessor II Features

The Assessor management interface provides options for managing the exam site, designing exams, creating questions, registering users, and reporting exam results. The sections below detail the features available through each of these options.

Manage Exam Site

- Customize the look of your site with your organization’s logo.
- Manage all aspects of the site, including number of learners and exams.
- Add learners and group them according to job function or by the exams they need to complete.
- Assign exams to learners and activate exams according to your schedule. Learners can view and print exam results.

Design Exams

- Select all exam characteristics.
- Allow learners to view feedback and their score on both correct and/or incorrect items. The feedback is displayed only after the exam has been completed.
- Control how feedback and answers display to learners.
- Randomize question order and answer choices to increase the integrity of results.
- Customize instructive feedback so learners gain more from training. Learners can also retake exams to improve their scores.
Create Questions

- Create questions using easy-to-use Web-based forms. Assessor allows you create questions with graphics and instructive feedback.
- Choose from a variety of question types, such as multiple choice, drag and drop, and true/false.
- Build question pools by topic or area. You can vary the questions that appear in your exams by drawing a percentage of questions from these pools.
- Control the number and content of distractors.

Register Users

- Add users and edit user account information at a later date.
- Set up user groups and subgroups.
- Assign exams to individual users, or save time by assigning exams to entire groups.

Report Results

- View and print learner statistics for an exam, including learner group, maximum and average scores, and number of attempts.
- View and print exam statistics, including:
  - Number of attempts and completed exams.
  - Maximum, minimum, and average scores.
  - Number of questions.
  - Generate statistics about individual questions, including number of times it was asked and number of times learners answered it correctly and incorrectly.
- Generate statistics for question pools.
- Generate statistics for individual answer choices per question.
