The use of online technologies for assessment does not have to be limited to large Universities. A website will be showcased that was created at a small, Liberal Arts College for little expense. This online assessment system will be demonstrated and participants will see how teacher educators can enter data on their students' performance online, and then use that data to make program decisions and to meet NCATE's standard 2. The steps for designing such a system by using technologies that already exist on most small college campuses will be demonstrated.

The King's College online assessment system can be found online at: http://staff.kings.edu/kdils/ncate/surveys/index.html
