Training Faculty and Students for New Roles & Technologies

Authors: Robert Rotenberg (Chair of Anthropology, College of Liberal Arts & Sciences), Joseph Salwach (Associate VP of Information Services), Diane Tarkowski (Faculty Software Coordinator, Information Services)

Technical departments often implement new educational technology without considering how it will impact instructor and student roles. At DePaul University, Information Services works closely with select faculty to determine how new technologies will affect these roles and then uses the information to train other faculty. This paper discusses this process using specific examples such as Blackboard, iClickers, iTunes U, and podcasting.
