This presentation will discuss and demonstrate how presentation modality (text with picture and text with video) and feedback can assist students in learning Microsoft Excel. The demonstration will provide examples and discuss when to use the appropriate presentation modality type and feedback. The demonstration will also discuss how the instruction was created and the problems in implemented the technology and lesson.

The presentation will recommend the usage of both types of presentation modalities depending on the subject that is being explained on the web page with suitable forms of practice and corrective feedback.
