Effective Models of Virtual Learning for K-12

Global Student Network, in collaboration with Jefferson County Education Services Center, present on developing effective models of education service to students in K-12 using Virtual Learning Academies.

GSN/JCESC are leading providers of Virtual Curriculum for grades 2-12. Currently serving 25,000+ students in over 250 school districts internationally, these partnered organizations demonstrate the efficacy of developing online learning communities for students whose needs go beyond the traditional classroom.

Nationwide, students at every level are being left behind, not due to academic abilities, but due to lack of available learning environments conducive to student learning needs. This presentation describes the most effective and conducive learning environments as an independent factor for each student, and how this unique and comprehensive Virtual Curriculum adapts to meet the needs of each student.

Many educational institutions fear that developing a Virtual Learning Academy will decrease academic efficacy, and take away from teacher’s responsibilities. This presentation demonstrates how educational organizations are more empowered to serve their students, using their teachers and administration, in the most effective learning environments available.
