Learning Resources Centers (LRC) is a new project that takes place in my country to develop school libraries. We have more than 35,000 schools, for sure we start gradually by developing 2,000 to 3,500 school libraries every year. Our focus of activity is for support of the curriculum for the school (elementary, secondary, and high-school) and to make every effort to help students and faculty succeed.

The Learning Resources Centers (LRC) is the hub of all technological efforts on the School. It operates six computers, provide users with a variety of office, educational and multimedia programs; high-speed black and white laser printer; data-show; DVD; TV.... Wire/wireless network connectivity is available in most schools. Consultants are available to help students and teachers with basic computer needs and questions.
