Designing Interactive eLearning for Your Students

By E.J. LeBlanc

Abstract: This presentation aims to share examples of interactive eLearning created for eighth grade English students and student pilots in the United States Coast Guard using Adobe Captivate and Articulate Storyline. While working as an eighth grade English teacher, the author used Adobe Captivate to design online instruction for his students and used it in a hybrid manner; he was able to use the instruction as a presentation tool in the classroom and students were able to receive the instruction from anywhere in the world. Later, the author began creating Interactive Courseware (ICW, a form of eLearning) at the Coast Guard’s Aviation Training Center. The author will share examples of eLearning he created with Storyline while sharing practical suggestions for anyone considering designing and developing eLearning to meet the learning needs of his or her students.
