This is a multimedia presentation to be used in a 20th century art history course. The centerpiece is the artist Henri Matisse, a great artist of the 20th century who expressed the triumphant celebration of life and joy of existence. This PowerPoint presentation is composed of examples of Matisse's art works, his writings together with text, images and audio files intended to produce a rich learning environment. Throughout the presentation links are provided to take the student on journeys of discovery of social, political and other events of the time for a complete interdisciplinary synthesis. This presentation is designed to serve the dual purpose of supplementing the more traditional format of the classroom and at the same time to be a self-standing work, which the student may peruse outside of class for further learning.
