Media Development for CD/Internet Applications
Orange County Public Schools: A Case Study

John E. Bomhoff, Interactive Media Corp., USA, jbomhoff@interactive-media.com

The Poster/Demo will describe in detail the problems and solutions relating to the process of adding digital video segments to an existing website. The delivery system described is a CD with embedded video that accesses the website. The developer was asked to repurpose and edit existing video and audio for the project. Additional graphics and audio were also created for the project. Each step in the decision process and each step relating to the media development, capture, compression, formatting, and storage of the elements will be explained in detail.
