A Video Exploration of Classroom Assessment

A Video Exploration of Classroom Assessment includes six workshops and multiple examples of assessment techniques that teachers can try out with their students. Video examples give teachers a window into a real classroom, so that they can see what the techniques look like in practice. More than any one specific feature, the real, unstaged nature of the video sets this CD-ROM apart from other assessment tools. The CD-ROM offer a variety of perspectives on the different techniques through interviews with teachers and students. A Video Exploration of Classroom Assessment gives teachers the tools to implement a new assessment technique or system in their classroom.
