TELEADAPT-SOCINF was an ADAPT project starting in January 1999 and finishing in October 2000, and co-funded by the European Social Fund, the regional government of Castilla y León and the Centre for the Telecommunication Development in Castilla y León (CEDETEL). In this project CEDETEL collaborated with the Institut für Technische Weiterbildung (ITW) and the Fachhochschule für Technik und Wirtschaft (FHTW).

The objective was to offer continuous training to the Small and Medium Sized Enterprises in the areas of Castilla y León in Spain and Berlin in Germany.

For this purpose we implemented a virtual learning space and several CDROM-supported hypermedias. The interdisciplinary group that worked in this project included technology experts, graphical designers, pedagogues, etc.

During nearly four months we run different groups of students, which gave us the opportunity to evaluate the materials and the telelearning experience itself. Most of the participants appreciated the advantages of this new methodology.
